

## Low Pressure Filter/Suction Filter Pi 270

Nominal pressure 16 bar (230 psi), up to nominal size 315

### 1. Features

#### High performance filters for modern hydraulic systems

- Provided for pipe installation
- Modular system
- Compact design
- Minimal pressure drop through optimal flow design
- Visual/electrical/electronic maintenance indicator
- Threaded and flange connections
- Quality filters, easy to service
- Equipped with highly efficient cellulose or glass fibre filter elements (long life)
- Beta rated elements according to ISO 16889 multipass test
- Elements with high differential pressure stability and dirt holding capacity
- Worldwide distribution

## 2. Flow rate/pressure drop curve complete filter

190 mm<sup>2</sup>/s  
33 mm<sup>2</sup>/s

y = differential pressure  $\Delta p$  [bar]  
x = flow rate V [l/min]

## 3. Separation grade characteristics

y = beta-value  
x = particle size [ $\mu\text{m}$ ]

determined by multipass tests (ISO 16889)  
calibration according to ISO 11171 (NIST)

## 4. Filter performance data

tested according to ISO 16889 (multipass test)

Sm-x elements with max.  $\Delta p$  5 bar

Sm-x 3  $\beta_{5(C)} \geq 200$   
Sm-x 10  $\beta_{10(C)} \geq 200$

values guaranteed up to 5 bar differential pressure

## 5. Quality assurance

Filtration Group filters and filter elements are produced according to the following international standards:

Norm	Designation
DIN ISO 2941	Hydraulic fluid power filter elements; verification of collapse/burst resistance
DIN ISO 2942	Hydraulic fluid power filter elements; verification of fabrication integrity
DIN ISO 2943	Hydraulic fluid power filter elements; verification of material compatibility with fluids
DIN ISO 3723	Hydraulic fluid power filter elements; method for end load test
DIN ISO 3724	Hydraulic fluid power filter elements; verification of flow fatigue characteristics
ISO 3968	Hydraulic fluid power-filters-evaluation of pressure drop versus flow characteristics
ISO 10771.1	Fatigue pressure testing of metal containing envelopes in hydraulic fluid applications
ISO 16889	Hydraulic fluid power filters-multipass method for evaluation filtration performance of a filter element

## 8. Technical specifications\*

Design:	in-line filter
Nominal pressure:	16 bar (232 psi)
Test pressure:	24 bar (348 psi)
Fatigue strength:	min $10^5$ Load changes at 0 – 16 bar (232 psi)
Temperature range:	-10 °C up to +120 °C (other temperature ranges on request)
Bypass setting:	
Pressure side:	$\Delta p$ 3.5 bar $\pm 10$ %
Suction side:	$\Delta p$ 2.5 bar $\pm 10$ %
Filter head material:	GAL
Spin-on cartridge material:	St
Sealing material:	NBR/AL
Maintenance indicator setting:	$\Delta p$ 2.2 bar $\pm 10$ %
Indicating range vacuum gauge:	-1 bar up to +1.5 bar
Pressure setting vacuum switch:	-1 bar up to +1.5 bar
Type of protection (suction side):	IP 54
Electrical data of maintenance indicator:	
Maximum voltage:	250 V AC/200 V DC
Maximum current:	1 A
Contact load:	70 W
Type of protection:	IP 65 in inserted and secured status
Contact:	normally open/closed
Cable connection:	M20x1.5

The switching function can be changed by turning the electric upper part by 180 ° (normally closed contact or normally open contact). The state on delivery is a normally closed contact. By inductivity in the direct current circuit the use of suitable protection circuit should be considered. Further maintenance indicator details and designs are available in the maintenance indicator data sheet.

We draw attention to the fact that all values indicated are average values which do not always occur in specific cases of application. Our products are continually being further developed. Values, dimensions and weights can change as a result of this. Our special-ized department will be pleased to offer you advice.

We recommend you to contact us concerning applications of our filters in areas governed by the EU Directive 94/9 EC (ATEX 95). The standard version can be used for liquids based on mineral oil (corresponding to the fluids in Group 2 of Directive 97/23 EC Article 9). If you consider to use other fluids please contact us for additional support.

## 9. Installation, operating and maintenance instructions

### 10.1 Filter installation

When installing the filter make sure that sufficient space is available to remove spin-on cartridge. Filter should be installed with the spin-on cartridge pointing downwards. The maintenance indicator must be visible.

### 10.2 Connecting the electrical maintenance indicator

The electrical indicator is connected via a 2-pole appliance plug according to DIN EN 175301-803 with poles marked 1 and 2. The electrical section can be inverted to change from normally open position to normally closed position or vice versa. The state on delivery is a normally closed contact.

### 10.3 When should the filter element be replaced?

1. Filters equipped with visual and electrical maintenance indicator: During cold starts, the indicator may give a warning signal. Press the red button of the visual indicator once again only after operating temperature has been reached. If the red button immediately pops up again and/or the electrical signal has not switched off after reaching operating temperature, the spin-on cartridge must be replaced after the end of the shift.
2. Filters without maintenance indicator: The spin-on cartridge should be replaced after the trial run or flushing of the system. Afterwards follow instructions of the manufacturer.
3. Please always ensure that you have original Filtration Group spare spin-on cartridges in stock.

### 10.4 Spin-on cartridge replacement

1. Stop system and relieve filter from pressure.
2. Unscrew the spin-on cartridge by using a filter wrench by turning counter-clockwise.
3. Make sure that the order number on the spin-on cartridge corresponds to the order number of the filter plate.
4. Oil the seal of the spin-on cartridge.
5. Spin-on cartridge must be installed according to the printed instructions.
