Filter media

Ti 10

Cellulose with polyester fibres

1. Features

The cellulose/polyester fibre blend chosen for this filter media is characterised by high air permeability and stability as well as very good hydrophobicity. The media combines efficient operation with a low pressure loss. Ti 10 is consequently ideal for filtering the intake air of gas turbines.

Characteristics

- Humidity resistant
- Low pressure loss
- Long service life
- Efficient operation
- Compliance with the requirements of DIN EN 60335-2-69/
  Dust class "M" and EN 779 "F9"
- Worldwide distribution
2. Technical data

<table>
<thead>

<td>DIN EN 60335-2-69 &quot;M&quot; EN 779 &quot;F9&quot;</td>
</tr>
</tbody>
</table>

Technical data is subject to change without notice!

3. Filtration efficiency

![Graph showing filtration efficiency vs particle size]

<table>
<thead>
<tr>
<th>x = Particle size [µm]</th>
<th>y = Filtration efficiency η [%]</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>&gt; 98 % at 5 µm</td>
</tr>
</tbody>
</table>

Test conditions:
- Filter surface load: 3.36 m³/m²*min
- Mass concentration: 200 mg/m³
- Test dust: Dolomite DRB 20 (Rock flour)

These values may vary depending on the nature of the dust, the composition of the gas and the cartridge design.

4. Chemical resistance/mechanical properties

<table>
<thead>
<tr>
<th>Chemical resistance</th>

</tbody>
</table>

These properties are of purely qualitative valuation and depending on the nature of the dust, the composition of the gas and the operating conditions (e.g. temperature).

5. Design

Please contact us for detailed technical information, any open questions and for general expert advice.
Completion of the relevant questionnaire would facilitate in the coordination of all important parameters.
Comprehensive documentation on our product range, cleaning units and cartridges can be provided.
